

The safety equipment certificate expired in port.

The captain was at sea when it lapsed.

The renewal was scheduled. The captain who knew was on shore leave.

The captain aboard had not been told to look.

Two flag-state notices later, the vessel discovered the gap.

€4,200 in late fees. Three weeks of correspondence.

Twelve certificates expire each year.
Two captains rotate through each
calendar.

The gap is ashore if nobody owns the bridge.

Cert × calendar × rotation — three
systems, one decision.

Which certificates expire while the captain is on rotation?

The bridge does not depend on which captain reads the diary.

Control over your complexity.
