

The notebook is the most *accurate* document on the vessel.

A handwritten diary in a drawer. Fault codes. Workarounds.
Diagrams the yard never received.

**It is also the only one that leaves with
the engineer who wrote it.**

The replacement engineer inherits the official records. The notebook is in a kitchen drawer in another country.

Three years of accumulated knowledge.

Inherited by the next chief as PDFs and silence. The notebook never made it past the gangway.

The PMS is the public face of the vessel.

The notebook is where the knowledge lives.

Every vessel has data. Few have
memory.

The notebook stays.

THE NOTEBOOK IS THE MOST ACCURATE DOCUMENT ON THE VESSEL.

09 / 09

1. High Coolant Temperature on Starboard Engine

You need to address the high coolant temperature reading on the starboard engine. Await inspection parts from the Cat dealer.
